Week 6 Capstone

By: Zackary Siddiqi

Major Update: PROJECT CHANGE

- Moved to a project with DBMS, MySQL and Java
  - *Why?* Previous project was a little too ambitious for me. Needed to learn everything from scratch. It required a lot of web development knowledge.
  - Whereas with this C.R.U.D. application, I'm working with tools and languages I have experience with from previous course.
  - **Another reason**: I am more passionate about building this project. It is something I want to actually use and be proud of.

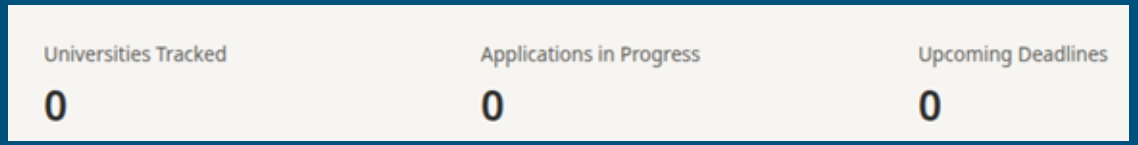

New Project: Graduate Application Dashboard System (G.RA.D.S.)

What is it?: App that allows users to organize and track their **Graduate/Undergrad** applications on a interactive dashboard.

- For this case, it's Graduate School Applications.
- Clean, user friendly UI
- Store documents, displays application status (ie. incomplete , in-progress, etc.)
- Can Filter dashboard based on the status, URL to program's course website
- **Unique features:** stats corner - countdown feature for deadlines

and application periods, and summery view

Working UI of GR.A.D.S.
