UI Overhaul - Upgraded Dashboard

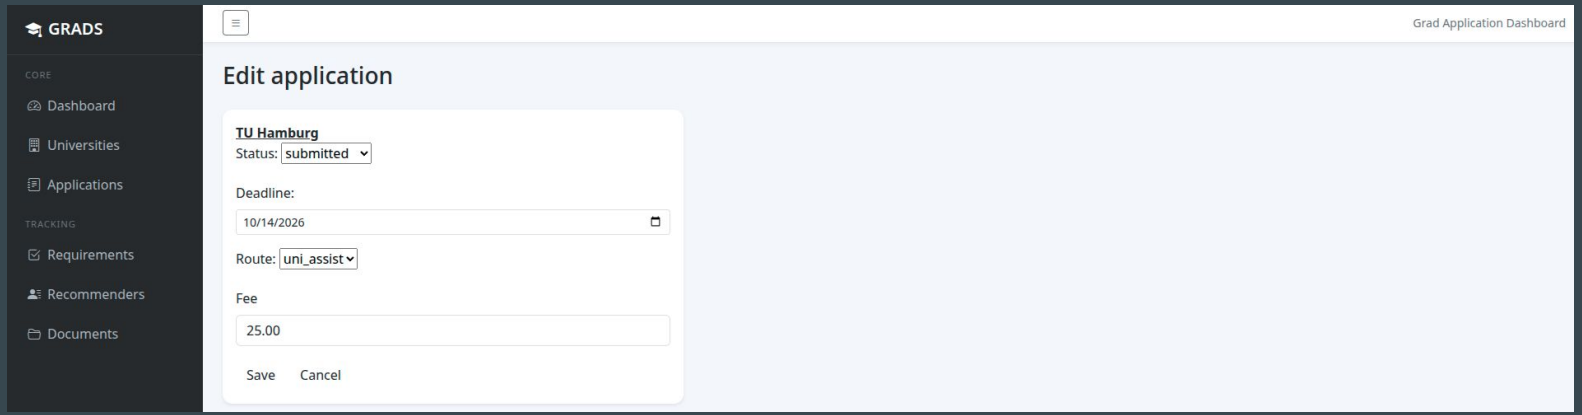

- Implemented a new dashboard using Thymeleaf Layout Dialects. And integrated new styling using bootstrap

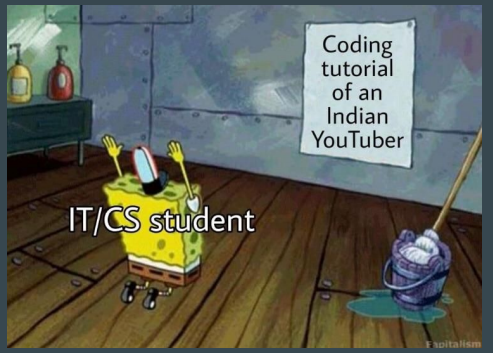

Application Section has been completed

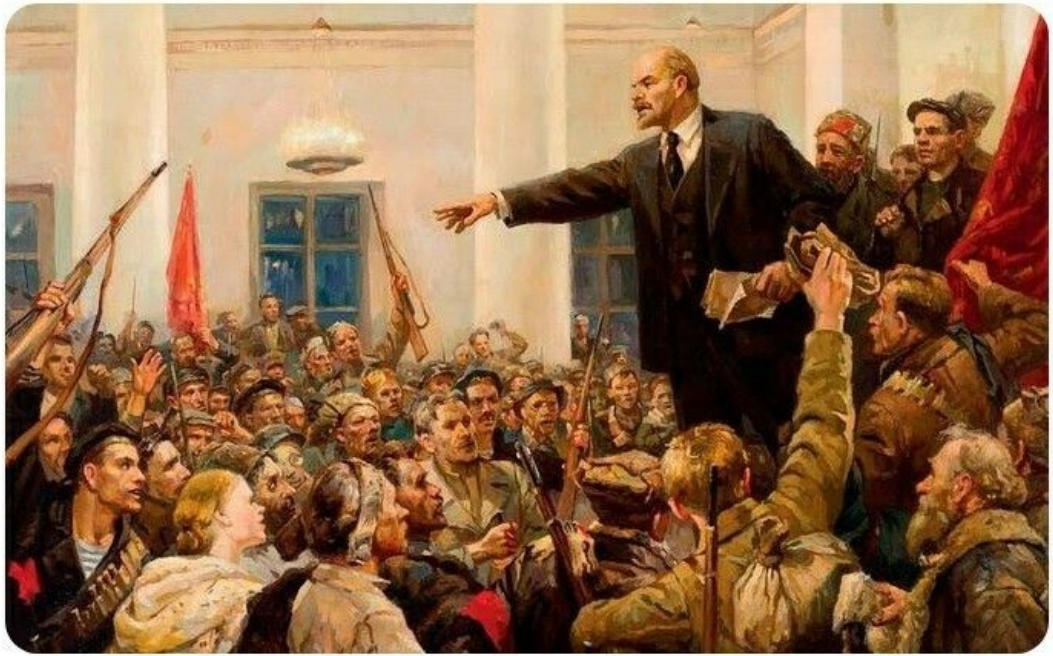

Next Steps for the Project:

- Create **User Accounts** and **login page** using Spring Security.
- Create a Users Entity in the DB
- Implement Documents, Recommenders, and Requirements pages
- Add the main page footer section
- Add **Visual Data** charts using Chart.js on the Homepage/Dashboard

When you finally remove useless classes from your code
